

INTELLECTUAL PROPERTY RESEARCH & PROTECTION

“Necessity is the mother of all inventions, but patent right is the father.” – Josh Billings

Drafting, Filing, Prosecution (Response to Office Action) Of Patents at Indian Patent Office as Well as Patent Cooperation Treaty (PCT)

With a team comprising of Patent Attorneys, Registered Patent Agents with strong technical background in various fields, we provide competent quality services in patent drafting, filing and prosecution in various areas of engineering and technology. We draft, file and prosecute patents not only at Indian Patent Office but also internationally (PCT filing).

Registration of Copyright, Trademark and Industrial Designs

At Innomantra, we offer trademark search and analysis along with the opinion on the chances of getting the trademark registered. We also offer filing and prosecution of application for trademark registration with Trademark Registry.

PCT National Phase Filing in India

We assist foreign individuals/organisations in filing and prosecution of PCT National Phase Applications at the Indian Patent Office.

Patentability of an Invention (Prior-art search)

Innomantra Consulting assess the invention and produces report on patentability based on which client can decide whether to file a patent or work further on the invention. Prior art search is also important to outline the scope of the claims while drafting the patent application and devising plans for further research in a particular area.

Freedom-to-Operate Analysis

Freedom-to-operate analysis or FTO analysis is used to determine whether a particular action, such as testing or commercializing a product, can be done without infringing valid intellectual property rights of others. The search scope includes enforced patents, published pending patent applications and expired patents followed by full review of claims of the most relevant located patents.

Technology Landscape Analysis

Based on technology landscape analysis, appropriate IP strategy, compliant with business strategy is devised for the organizations because a good IP strategy is a critical part of business plan and growth at any stage.

Validity Search

A validity/invalidity search seeks to uncover patents or other published prior art that may render a granted patent invalid. The search results consist of a search report, a claims mapping chart and citation of prior art. The results of the search are used to invalidate a patent involved in infringement litigation or to support due diligence and ascertain the validity of a patent.

Claim Chart Preparation

A claim chart is a highly detailed document that offers an argument explaining precisely how a certain product of a particular organization arguably infringes upon a claim of the patent. Claim charts are prepared to determine and establish the extent of overlap between one or more claims of a patent and a product/technology.
